QUARTERLY GROUND-WATER MONITORING
THIRD QUARTER 2004 – 4th ROUND
Remedial Investigation/Feasibility Study
Astoria Area-Wide Petroleum Site
Astoria, Oregon
DEQ ECSI File #2277

Dear Ms. Coates:

This technical memorandum presents the results of the Third Quarter 2004 ground-water monitoring completed in July 2004 for the Remedial Investigation/Feasibility Study (RI/FS) at the Astoria Area-Wide Petroleum Site. The ground-water sampling was performed at the site by *EnviroLogic Resources, Inc.*, from July 19 through July 23, 2004, in accordance with the Work Plan Addendum, Phase 1 Ground Water Assessment (*EnviroLogic Resources*, 2003b). This technical memorandum presents the analytical results of the fourth ground-water sampling event (Third Quarter 2004). The site location is shown on Figure 1 and a site plan is shown on Figure 2.

Ground-water samples were collected and analyzed for all constituents of interest (COIs) from 36 ground-water monitoring wells during the sampling event. Eleven monitoring wells containing free-phase hydrocarbons were not sampled. A total of 44 samples including trip blanks, equipment blanks, field duplicates and field samples were obtained. Field samples were collected from MW-2(M), MW-6(M), MW-7(M), MW-10(M), MW-11(M), MW-12(A) through MW-14(A), MW-16(A) through MW-24(A), MW-26(A) through MW-36(A), MW-38(A), MW-39(A), MW-43(A), MW-45(A) through MW-48(A), and MW-1(F) were collected for laboratory analysis. Sampling methods, containers, preservatives, and holding times for each analytical method are provided in the Field Sampling Plan (Appendix A of the RI/FS Work Plan [*EnviroLogic Resources*, 2002b]). In addition, specific procedures used during the sampling event are presented in Appendix A of this document. No significant modifications were made to these methods and procedures. The locations of the monitoring wells and recovery wells are shown on Figure 3.

The following field parameters were measured as part of the quarterly monitoring event: pH, temperature, specific conductance, oxidation-reduction potential (ORP), and dissolved oxygen (DO). Ground-water sampling logs are presented in Appendix B.

Ms. Anna Coates
November 23, 2004
Page 2

Ground-water level measurements in the near-shore monitoring wells and from the Pier 2 monitoring point were performed over as short a period of time as possible. The water level in Slip No. 2 was measured to be about 0.94 feet lower than the lowest elevation measured in the near-shore wells when a correction for tides is applied. Tide stages from Tongue Point, a few miles upstream on the Columbia River, were used to make the correction.

SUMMARY OF THE THIRD QUARTER 2004 SAMPLING EVENT

The measured potentiometric surface and chemical concentration data representing the key or indicator COIs for the ground-water samples collected during the quarterly sampling event are presented in the following sections.

The ground-water flow direction at the Astoria Area-Wide site continues to be generally to the northwest and toward Pier 2. The potentiometric surface is presented on Figure 3. The ground-water elevation data are presented in Table 1. Ground-water elevations have been corrected for the presence of free product using either the measured specific gravity of the hydrocarbon in the well, or 0.87 where no well-specific density has been measured.

A total of 44 water samples were submitted for chemical analysis during this fourth round of sampling. This included 36 field samples, 2 field duplicates, 2 equipment blanks, and 4 trip blanks. Table 2 shows the chemicals detected and the range of concentrations observed in monitoring wells during the sampling event. Ground-water analytical results from this round of sampling are summarized in Tables 4 through 9. Figures 4 through 6 show the monitoring well locations along with detected concentrations of select petroleum constituents. Graphs showing the concentrations of key constituents and water elevations in these wells are included in Appendix C. Laboratory analytical data sheets, QA/QC data, the data validation report, and chain-of-custody forms for this ground-water sampling event are presented in Appendix D. Data have been qualified where detections in blanks (e.g., laboratory method blanks or equipment blanks) affect the reported analytical result. No data were rejected as a result of the data validation.

The depth to product, product thickness, and depth to water are measured monthly using an interface probe. The free-phase product measurement data are included in Table 1. Monitoring-wells MW-1(M), MW-3(M), MW-4(M), MW-8(M), MW-9(M), MW-15(A), MW-37(A), MW-40(A), MW-41(A), MW-42(A), and MW-44(A) contain measurable product. The product thickness in the wells varies month to month and product is pumped out of these wells on a monthly basis. The volume of product recovered from these monitoring wells through September 2004 is presented in Table 10.

SUMMARY OF THE GROUND-WATER MONITORING EVENTS

With completion of the 4th Round of ground-water quality sampling, the ground-water monitoring requirements of the Order have been satisfied. After the fourth sampling event, *EnviroLogic Resources* reviewed the analytical data that had been collected to obtain a better understanding of how ground-water quality varied from the first sampling event through the last sampling event. Based on this review seven monitoring wells were identified as key indicator wells [MW-2(M), MW-10(M), MW-18(A), MW-21(A), MW-29(A), MW-30(A), and MW-39(A)]. The key monitoring wells were chosen primarily by location significance. For each of these seven monitoring wells a graph showing ground-water elevation and the concentrations of selected COIs are plotted over time. The indicator COIs include TPH-Gx, TPH-Dx, benzene, naphthalene, and 1,2,4-trimethylbenzene. The graphs are included in Appendix C.

Review of the graphs and the data validation indicate that the ground-water database is sufficient to conduct risk assessment and evaluate remedial alternatives. If further ground-water monitoring is deemed necessary, the PRP Group proposes to conduct this after the Remedial Investigation report is complete and specific monitoring objectives can be developed.

CLOSING COMMENTS

In accordance with the approved ground-water monitoring program the July 2004 event was the final quarterly ground-water monitoring event and the September 2004 event was the final monthly ground-water elevation monitoring event.

Please call me at (503)768-5121 if you have any questions or comments regarding this quarterly monitoring report.

Sincerely,
EnviroLogic Resources, Inc.

Thomas J. Calabrese, RG, CWRE
Principal/Hydrogeologist
Project Manager

TABLE 2
CHEMICALS DETECTED IN GROUND WATER
3rd QUARTER 2004

Remedial Investigation/Feasibility Study
Astoria Area-Wide Petroleum Site
Astoria, Oregon

Chemical	Total Number of Analyses	Number of Analyses with a Detection	Frequency of Detection (Percent)	Maximum Value (ug/L)
Diesel Range Organics	36	18	50	3960
Gasoline Range Organics	36	17	47	39,800.0
Heavy Oil Range Organics	36	5	14	951.00
1,2,4-Trimethylbenzene	36	17	47	3300
1,3,5-Trimethylbenzene	36	12	33	665
Benzene	36	19	53	1020
Ethylbenzene	36	22	61	2070
Isopropylbenzene	36	19	53	137
n-Propylbenzene	36	22	61	355
Toluene	36	18	50	5520
Xylenes	36	19	53	8,130
Acenaphthene	36	12	33	1.41
Anthracene	36	1	3	0.156
Benzo(a)anthracene	36	4	11	0.0262
Benzo(a)pyrene	36	2	6	0.0177
Benzo(b)fluoranthene	36	4	11	0.0267
Chrysene	36	5	14	0.0412
Fluorene	36	9	25	1.83
Naphthalene	36	25	69	1,360
Phenanthrene	36	6	17	1.55
Chromium	3	3	100	28
Lead	36	33	92	58.7

TABLE 3
DATA QUALIFIER DEFINITIONS

Remedial Investigation/Feasibility Study
Astoria Area-Wide Petroleum Site
Astoria, Oregon

- U** The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- J** The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
- UJ** The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- J+** The analyte was positively identified; the associated numerical value appears to be bias high.
- J-** The analyte was positively identified; the associated numerical value appears to be bias low.
- UJ-** The analyte was not detected above the reporting limit. However, the reporting limit appears to be bias low and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- C** Common laboratory contaminant
- B** The analyte was also identified in a field or laboratory blank associated with this sample or sample group.
- R** The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
-

APPENDIX A

METHODS AND PROCEDURES

APPENDIX A
METHODS AND PROCEDURES
GROUND-WATER SAMPLING

Standardized methods and procedures were developed prior to commencement of field activities. This protocol helped to control the quality of samples collected and helped to protect the health and safety of all site personnel. Quality-assurance protocols utilized are discussed in detail in the Quality Assurance Project Plan (QAPP) in Appendix B of the RI/FS Work Plan. Sampling procedures and protocols for each sampling activity were developed to meet the project data quality objectives and were based on proven and acceptable sampling methods as established by EPA guidance documents, Oregon state regulations, and professional judgment.

EnviroLogic Resources, Inc., performed all ground-water sampling and related activities. Ground-water level measurements were recorded from the monitoring wells at the start of the sampling event.

Ground-water samples were collected from 37 wells. The monitoring wells were first checked for free product, water levels were measured, and then approximately 3-borehole volumes of ground water were removed. Wells were purged using an ES-40 purge pump connected to clear vinyl PVC tubing. The water was transferred into a 250-gallon tote. Once the appropriate amount of water was purged from the well, the pH, temperature, and conductivity were measured continuously until stabilization using an Oakton meter. If the well was purged of all water, then the purging process was considered complete. Once ground water recovered or the field parameter readings were stable, the DO was measured down hole using a YSI 55 DO meter. Next, ground water was sampled with a weighted disposable PVC bailer to fill the VOA bottles. After filling the VOA bottles, polyethylene tubing was inserted into the well if not already present in the well from the last sampling event and connected to silicon tubing, and ground water was sampled through this tubing into the appropriate bottles using a Model 410 Solinst peristaltic pump. Finally, ground water was collected into a glass beaker and field parameters (pH,

temperature, conductivity, and ORP) were measured and recorded. The ORP was measured with an ORPTestr. Field parameters are presented on the Ground-Water Sampling Logs in Appendix B. The tubing was left inside the well casing to be used during the next sampling event, and the well was closed. When the tote was full of purged water, the water was pumped into a 4,000-gallon Baker tank, which is stored near the bank at the base of Slip 2.

Product was removed by using polyethylene tubing and a peristaltic pump. The tubing was held at the elevation of the product to collect only product to the extent possible. The product is contained in a 55-gallon drum stored on site.

Investigation derived waste (IDW), including purged and decontamination water are stored on-site in one staging area. The water is stored in a 4,000-gallon Baker tank. Samples of the water in the Baker Tank were collected and analyzed to compare concentrations to the discharge limits set by DEQ in a letter dated August 27, 2003. The concentrations of constituents in the decontamination and purge water were below discharge limits and the water was discharged from the Baker tank to a nearby storm water catch basin that has an outfall in Slip 2.

Field equipment blanks were collected and analyzed along with laboratory method blanks to evaluate whether the analytical results are representative of the sampled material and not influenced by non-site related contamination. Laboratory QC samples included laboratory matrix or method spikes, laboratory matrix spike duplicates, laboratory duplicates, and laboratory method blanks. These are described in Appendix B of the RI/FS Work Plan (*EnviroLogic Resources*, 2002b).

***LABORATORY ANALYTICAL REPORTS
WITH DATA VALIDATION REPORTS***

MEMORANDUM

To: File – 10077.013

From: Nancy East-Smith

Date: September 15, 2004

Subject: **QUALITY ASSURANCE/QUALITY CONTROL REVIEW**
Fourth Complete Ground Water Sampling Event – 3rd Quarter 2004
ASTORIA AREA WIDE PETROLEUM SITE

This report presents the results of our review of laboratory analytical reports and the data validation conducted based on the laboratory reports for the third ground-water sampling event conducted at the site. The samples were collected on August 19, 20, 21, 22 and 23 2004 as part of the fourth ground-water sampling event. Sample handling, analysis and quality control (QC) procedures were established in the July 15, 2002, Remedial Investigation/Feasibility Study, Astoria Area-Wide Petroleum Site, Astoria, Oregon, Phase I Work Plan (Phase 1 RI/FS) and the Work Plan Addendum, Phase 1 Ground Water Assessment, Astoria Area-Wide Petroleum Site, Astoria, Oregon, DEQ ECSI File #2277. Both documents were prepared by *EnviroLogic Resources, Inc.* The samples were submitted to North Creek Analytical, Inc., (NCA) of Beaverton, Oregon, for analysis.

A total of 44 water samples were submitted for analysis. This included 36 field samples, 2 field duplicates, 2 equipment blanks and 4 trip blanks. The samples were submitted in 2 groups, each group was assigned a lab order number. Basic information about each lab order number is presented below:

Lab Order	Number of Samples	Sample Type	Date Collected	Field Locations
P4G0721	19 2 1 1	Field Samples Trip Blanks Equipment Blank Field Duplicate	7/19, 20, 21/2004	MW-48, MW-47, MW-46, MW-7, MW-33, MW-10, MW-6, MW-43, MW-32, MW-31, MW-35, MW-30, MW-34, MW-19, BM-19, MW-1, MW-23, MW-21, MW-20

P4G0839	17 1 1 2	Field Samples Field Duplicate Equipment Blank Trip Blank	7/21, 22, 23/2004	MW-28, MW-24, MW-26, MW-2, BM-17, MW-17, MW-18, MW-16, MW11, MW-45, MW-39, MW-27, MW-36, MW-38 MW-14, MW-13 MW-29, MW-12
---------	-------------------	---	----------------------	--

As stated in Appendix B, Sections 8.0, 9.0, and 10.0 of the Phase I RI/FS Work Plan, our goal was to review the laboratory reports and chain of custodies for Quality Assurance/Quality Control (QA/QC) parameters and statistical parameters. The findings of our review are presented in the following pages. Qualified data are presented in the attached tables. Analyses performed are listed below.

Analysis	Reference
Gasoline Hydrocarbons	NWTPH-Gx
Diesel and Heavy Range Hydrocarbons	NWTPH-Dx
Total Metals (lead only)	EPA Method 200 Series
Total/Dissolved Metals (Chromium)	EPA Method 200 Series
Hexavalent Chromium	EPA Method 7195
Volatile Organic Compounds (VOCs)	EPA Method 8260B
Polynuclear Aromatic Compounds (PAHs)	EPA Method 8270M-SIM

EPA = U.S. Environmental Protection Agency

NWTPH = Northwest Total Petroleum Hydrocarbons

SIM = Selected Ion Monitoring

CHAIN OF CUSTODY REVIEW

Chain of custodies (COC) and laboratory sample receipt forms were reviewed to determine sample condition upon arrival at the lab, to determine if analysis requested was in accordance with the RI/FS Work Plan, and that analyses requested were performed.

- No special conditions were noted on the laboratory cooler receipt or chain of custody forms for either lab order.
- Cooler temperatures recorded at the laboratory upon receipt ranged from 1.9°C to 6.9°C.
- Analyses requested on the COC reflect the analysis presented in the laboratory reports.

QUALITY CONTROL/QUALITY ASSURANCE REVIEW

DATA QUALIFIERS

The following data qualifiers are used in this data validation report:

- **B.** The analyte was also identified in a field or laboratory blank associated with this sample or sample group.
- **J.** The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
- **J+.** The analyte was positively identified; the associated numerical value of the analyte in the sample is the estimated to be biased high
- **U.** The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

The attached tables present the original result and the qualified result for all analyses that were qualified. The tables are organized by analytical method and only qualified analytical results are included.

HOLDING TIMES

We reviewed the laboratory reports and compared sample dates, prepared dates and analyzed dates for all the analyses. One holding time exception was noted for a re-extracted sample. The laboratory included a case narrative for this holding time exception; based on our judgment no data was qualified.

FIELD BLANKS

Equipment Blanks

Equipment blanks were analyzed at the required frequency. A total of two equipment blanks were submitted for analysis of VOCs. Both equipment blanks were obtained by running de-ionized water through a sample bailer.

No analytes were detected in either equipment blank.

Trip Blanks

A total of 4 trip blanks were submitted for VOC analyses with the 2 lab orders. The trip blanks were provided by the laboratory and consisted of water in a 40 ml clear VOA (volatile organic analysis) vial.

No analytes were detected in the trip blanks.

Laboratory Method Blanks

Laboratory method blanks were analyzed at the required frequency. Laboratory blanks were performed on sample batches so each blank is associated with a batch of field

samples. The batch sample associated with each field sample is identified in the laboratory report. Analytes detected in laboratory blanks are noted below:

Lab Order/ Batch No.	Field Samples Qualified	Analyte Detected in Laboratory Blank	Analytical Method	Blank MDL	Blank RL
P4G0721					
4070892	MW-6, MW-33, MW-22, MW-35, MW-1, MW-23, MW-19, BM-19, MW-47, MW-48, MW-46	TPH-Dx 0.104J mg/l	NWTPH-Dx	0.0870 mg/l	0.250 mg/l
4070893	None	TPH-Dx 0.118J mg/l	NWTPH-Dx	0.0870 mg/l	0.250 mg/l

Field samples in the same batch that had analytes detected within 5 times the blank concentration are qualified by placing a JB flag next to the detected concentration if the detected concentration is greater than the RL. Where the detected concentration is less than the RL, the RL value is reported with a UB flag (for both organics and inorganics). Data is not qualified where field samples had analytes detected at concentrations greater than 5 times the corresponding blank concentration. Laboratory dilution of field samples was considered.

SURROGATE RECOVERIES

Field Samples

One or more surrogates were utilized for each analysis except for metals analyses. We reviewed all of the surrogate recoveries relative to the specified control limits and observed one exception. Where surrogate recoveries were not within control limits batch specific QC information and laboratory notes were reviewed to evaluate the data. In this case, the laboratory also provided a case narrative. This evaluation resulted in no data being qualified due to surrogate recovery issues.

SPIKE AND SURROGATE RECOVERIES

Laboratory Control Samples

Laboratory Control Samples (LCS) were conducted at the required frequency. Based on our review all LCS quality control information was acceptable.

Matrix Spike Samples

Matrix Spike (MS) were conducted at the required frequency. Based on our review all spike compounds and/or surrogates meet quality control limits. This evaluation resulted in no data being qualified.

LABORATORY AND FIELD DUPLICATES/RELATIVE PERCENT DIFFERENCE

Field duplicate samples were obtained at the frequency of two for 36 field samples. The two duplicates were BM-17 and BM-19. The field duplicate frequency set by the Work Plan was one for every 20 field samples. MSD, Laboratory Control Sample Duplicates (LCSDs), laboratory duplicates and field duplicate analytical information was reviewed. Based on our review one laboratory duplicate sample relative percent differences (RPDs) was not within acceptable limits. Where RPDs were not within control limits, batch specific QC information and laboratory notes were reviewed to evaluate the data. This evaluation resulted in no data being qualified due to RPD exceptions. MS/MSD exceptions for duplicate samples were included in the previous section. No field duplicate exceptions were noted below. RPDs are generally not evaluated for concentrations within 5 times the RL and these are not presented below.

STATISTICAL EVALUATION

Precision

Precision is a measure of the ability to reproduce data and is evaluated using duplicate samples. This includes field duplicates, laboratory duplicates, MSDs and LCSDs. Relative percent difference (RPD) is used to measure the reproducibility as described in section 10.1 of Appendix B of the RI/FS Work Plan. The RPD control limits are listed in the laboratory reports. These control limits may be slightly different than those presented in the Work Plan, but they are still acceptable. Overall precision for the analysis was acceptable.

RPDs outside the control limits would represent statistical exceptions and indicate a lack of ability to reproduce the data. LCSD evaluate the effect laboratory conditions have on precision -- no RPD exceptions were noted in LCSDs. Field duplicates, MSDs and lab duplicates evaluate the effect field and laboratory conditions have on precision. The only exception noted in the duplicates did not indicate there was an out-of-control condition for the batch. Overall, the precision of the laboratory data is acceptable, and no data is qualified due to lack of precision.

Accuracy

Accuracy measures the bias in a system and is evaluated using percent recovery of surrogate, spikes and LCS. LCS evaluates bias due to laboratory conditions. Bias due to field and laboratory conditions is evaluated using surrogates and matrix spikes. Our review indicates accuracy was acceptable.

Representatives

Equipment blanks, laboratory blanks and field duplicate samples evaluate how representative analytical results are of actual site conditions. Blanks evaluate the introduction of "analytes" from outside sources such as field equipment, transportation equipment and the laboratory environment. In general there were minimal problems with laboratory and field equipment introducing analytes that were not representative of sample conditions. The one documented problem is summarized here.

- TPH-Dx was detected in the laboratory method blanks for two batches at concentrations above the MDL but below the RL. TPH-Dx detected within 5 times the blank concentration would not be considered representative of field conditions for field samples in the same batches.

Duplicate field samples attempt to evaluate how representative a sample is of site conditions. Two duplicate water samples were reviewed. All analytes in both cases met QC criteria. Overall, the representativeness of the laboratory data is acceptable.

Completeness

Completeness evaluates how successful the data set is at being valid. Our data group was 100 percent complete with respect to rejected analysis.

Qualified TPH-Dx Data

Notes and Definitions

- A-01 Detected hydrocarbons appear to be due to mainly to weathered gas and biogenic interference, however, some weathered diesel may be present as well.
- A-05 %RPD for the LCS/LCS Duplicate QC samples are outside of specified criteria. Recoveries for these QC Control samples are within acceptable limits.
- D Data reported from a dilution.
- D-08 Detected hydrocarbons in the diesel range appear to be due to overlap of gasoline range hydrocarbons.
- D-15 Detected hydrocarbons have non-petroleum peaks or elution pattern that suggests the presence of biogenic interference.
- D-17 Detected hydrocarbons in the diesel range do not have a distinct diesel pattern and may be due to heavily weathered diesel or possibly biogenic interference.
- Da Data reported from a preparation or analytical dilution.
- J Estimated value.
- R-03 The reporting limit for this analyte was raised due to matrix interference.
- R-05 Reporting limits raised due to dilution necessary for analysis.
- R-05a Reporting limits raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.
- U Analyte included in the analysis but not detected.
- Ua Analyte included in the analysis, but not detected.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

Notes and Definitions

- A-01 Detected hydrocarbons appear to be due to mainly to weathered gas and biogenic interference, however, some weathered diesel may be present as well.
- A-05 %RPD for the LCS/LCS Duplicate QC samples are outside of specified criteria. Recoveries for these QC Control samples are within acceptable limits.
- D Data reported from a dilution.
- D-08 Detected hydrocarbons in the diesel range appear to be due to overlap of gasoline range hydrocarbons.
- D-15 Detected hydrocarbons have non-petroleum peaks or elution pattern that suggests the presence of biogenic interference.
- D-17 Detected hydrocarbons in the diesel range do not have a distinct diesel pattern and may be due to heavily weathered diesel or possibly biogenic interference.
- Da Data reported from a preparation or analytical dilution.
- J Estimated value.
- M-04 Sample Filtered through 0.45 micron filter in Laboratory prior to analysis.
- R-03 The reporting limit for this analyte was raised due to matrix interference.
- R-05 Reporting limits raised due to dilution necessary for analysis.
- R-05a Reporting limits raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.
- U Analyte included in the analysis but not detected.
- Ua Analyte included in the analysis, but not detected.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

Notes and Definitions

- A-01 Detected hydrocarbons appear to be due to weathered gas as well as weathered diesel.
- A-02 Detected hydrocarbons appear to be due to gas as well as biogenic interference.
- D Data reported from a preparation or analytical dilution.
- D-08 Detected hydrocarbons in the diesel range appear to be due to overlap of gasoline range hydrocarbons.
- D-15 Detected hydrocarbons have non-petroleum peaks or elution pattern that suggests the presence of biogenic interference.
- D-17 Detected hydrocarbons in the diesel range do not have a distinct diesel pattern and may be due to heavily weathered diesel or possibly biogenic interference.
- J Estimated value.
- O-07 This sample was extracted outside the EPA recommended holding time.
- Q-06 Analyses are not controlled on RPD values from sample concentrations less than 5 times the reporting limit.
- R-03 The reporting limit for this analyte was raised due to matrix interference.
- R-05 Reporting limits raised due to dilution necessary for analysis.
- R-05a Reporting limits raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.
- S-10 The recovery for this parameter is outside acceptance limits. See case narrative.
- U Analyte included in the analysis but not detected.
- X See case narrative.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

Case Narrative

CLIENT: Envirologic Resources, Inc.
PROJECT: Astoria Area-Wide Petroleum Site RI-1
PROJECT #: 10077.004

August 16, 2004
NCA #: P4G0839
page 1 of 2

1.0 DESCRIPTION OF CASE

North Creek Analytical-Portland received nineteen water samples and two Trip Blanks on May 28, 2004 from Envirologic Resources, Inc. for Diesel/Residual Range Organics by NWTPH-Dx, Gasoline Range Organics by NWTPH-Gx, Specific Volatile Organic Compounds by EPA Method 8260B, Total Lead by EPA 200.8 and Polynuclear Aromatic Compounds by EPA Method 8270M-SIM analyses.

2.0 SAMPLE LIST

Refer to the *Chain of Custody* documents for a summary of sample information.

Each group of samples received is given NCA #, preceded by a “P” for Portland. This number consists of a one-digit code for the year, a two-digit code for the month and a sequential number for the group within the month. Each sample within the group is numbered sequentially by placing a dash after the NCA#.

3.0 COMMENTS ON ANALYSIS

3.1 Sample Receipt

The samples were received intact from Envirologic Resources, Inc. Ten coolers were brought to the lab by NCA courier. There was custody seals present on the coolers. The samples were clearly labeled and matched the chain of custody. Sample temperature was measured at 5.5, 6.5, 5.9, 4.8, 3.1, 4.0, 2.5, 2.5, 5.4 and 1.9 degrees Celsius upon receipt using a Digital thermometer and recorded with sample log in information.

3.2 Analysis

The samples were analyzed following the procedures outlined in the applicable methods. The samples were refrigerated at ~4 °C, and extracted and analyzed within the EPA recommended holding times without incident with the exception of sample **MW-36 (A)**. This sample was initially extracted within hold time but had to be re-extracted out of recommended hold time due to the low surrogate recovery of Fluorene-d10. Exceptions and/or anomalies encountered during analysis are footnoted and described in the *Notes and Definitions* section of the *Analytical Reports* and summarized in Sections 4.0 and 5.0 below.

Case Narrative

CLIENT: Envirologic Resources, Inc.

PROJECT #: 10077.004

August 16, 2004
NCA #: P4G0839
page 2 of 2

4.0 QC RESULTS

Surrogate and quality control parameters that were outside control limits are noted on the appropriate pages of the *Analytical Reports*. With the exception of those noted below or on the *Analytical Reports* following, all quality control parameters, including those specific to instrumentation, such as daily CCV recoveries, were within established control limits:

Polynuclear Aromatic Compounds by EPA Method 8270M-SIM

Surrogate recovery of Fluorene-d10 on sample **MW-36 (A)**, batch 4071238 was below the control limits. This sample was re-extracted outside the recommended hold time and analyzed as batch #4080328 with acceptable surrogate recoveries. Sample results of both initial and re-analyses are reported with no target analyte detected.

5.0 SAMPLE RESULTS

Where applicable, qualifiers have been added to sample results as footnotes and are detailed in the *Notes and Definitions* section of the *Analytical Report*. There were no anomalies encountered during the preparation and analysis of the samples.

The dilution factor for a sample, if applicable, is depicted on the *Analytical Report*. Method Reporting Limit (MRL) values for analyte quantitated from a dilution are raised by the dilution factor. The method blank sample may be referenced for the initial MRL.

Notes and Definitions
Report Specific Notes:

- D - Data reported from a preparation or analytical dilution.
- F-02 - Since Total Oil & Grease was ND for sample, Non-polar hydrocarbon analysis was not performed.
- J - Estimated value.
- U - Analyte included in the analysis but not detected.

Laboratory Reporting Conventions:

- DET - Analyte DETECTED at or above the Reporting Limit. Qualitative Analyses only.
- ND - Analyte NOT DETECTED at or above the reporting limit (MDL or MRL, as appropriate).
- NR / NA - Not Reported / Not Available
- dry - Sample results reported on a dry weight basis. Reporting Limits are corrected for %Solids when %Solids are <50%.
- wet - Sample results and reporting limits reported on a wet weight basis (as received).
- RPD - Relative Percent Difference. (RPDs calculated using Results, not Percent Recoveries).
- MRL - METHOD REPORTING LIMIT. Reporting Level at, or above, the lowest level standard of the Calibration Table.
- MDL* - METHOD DETECTION LIMIT. Reporting Level at, or above, the statistically derived limit based on 40CFR, Part 136, Appendix B.
*MDLs are listed on the report only if the data has been evaluated below the MRL. Results between the MDL and MRL are reported as Estimated results.
- Dil - Dilutions are calculated based on deviations from the standard dilution performed for an analysis, and may not represent the dilution found on the analytical raw data.
- Reporting limits - Reporting limits (MDLs and MRLs) are adjusted based on variations in sample preparation amounts, analytical dilutions and percent solids, where applicable.

NORTH CREEK ANALYTICAL COOLER RECEIPT FORM

(Army Corp. compliant)

Client: Envirologic

1. Please sign for receipt and opening of 1 cooler or other _____
By (print) Carrie Farnsworth (sign) Carrie Farnsworth
2. Date samples received 9/17/04 Date opened: Same or / /
3. Delivered by: NCA courier FedEx UPS Courier Client Other _____
Airbill # if applicable _____ (Put copy of shipping papers in file)
4. There were 0 custody seals present, signed by _____ date / / .
5. Were the custody seals unbroken and intact at the date and time of arrival? Yes No
6. Was ice used? yes no Type of ice: blue ice gel ice real ice
Temperature (degrees C) 5.7 Raytek thermometer _____ Digi-Therm (probe temperature blank)
7. Are custody papers sealed in a plastic bag and taped inside to lid? Yes No
8. Were custody papers filled out properly (ink, signed, etc.)? Yes No
If "no" please specify: _____
9. Was project identifiable from custody papers?
Name of project Astoria (if applicable)
10. Initial and date for unpacking: VE (initials) date / /
11. Packing material: bubble wrap/bag styrofoam cardboard other
12. Were samples in bags? Yes No
13. Did all containers indicated on the COC arrive? Yes No
If "no" please indicate which containers were absent _____
14. Were all containers unbroken and labels in good condition? Yes No
If "no" please indicate which containers _____
15. Were all bottle labels complete (ID, date, time, signature, etc.)?
Do the IDs, times, etc. agree with the COC? Yes No
 Yes No
If "no" please indicate which containers _____
16. Are containers properly preserved for indicated analysis? Yes No
17. Is there adequate volume for the test(s) requested? Yes No
18. If vials were submitted, are they free of bubbles? N/A Yes No
19. Log-in phase: Date samples were logged in: 9/17/04 Elm Project # P 4T0019
20. Logged in by (print) Vanessa Brus (sign) Vanessa Brus
21. Was the project manager notified of status? (Use back of form as a record) Yes No
